

Stop Thinking of Them as IT Projects

**Presentation to the FMI PD Week
November 21, 2018**

**By: Dr. Marc Fortin
Patricia Sauvé-McCuan**

Objectives

- To start a conversation; to present a different perspective on achieving business outcomes through projects
- To educate; to allow FM community to influence for greater project success

How the customer
explained it

How the project leader
understood it

How the analyst
designed it

How the programmer
wrote it

What the beta testers
received

How the business
consultant described it

How the project was
documented

What operations
installed

How the customer was
billed

How it was supported

What marketing
advertised

What the customer
really needed

THE CONSULTANTS HANDBOOK PART 6:
ALWAYS DO THE MATH YOURSELF

geek and poke

Historical project approach

- System replacement mind-set often exists as key business driver
- Outcomes at the end of a multi-year IT project
- Internal process focused
- Each problem is unique, each organization is unique and 'we need to build our own'
 - Unsuccessful private sector relationships
- High fence between business and IT
 - IT cannot/should not influence the business; business leads

ONE YEAR IN A IT PROJECT - DAY 19

Today's realities

- Outcomes are at the end of a long multi-year IT project; solution often obsolete before the project is completed
- 'Out-of-the box' functionality is misunderstood
 - Software is a human creation; some artistic, human elements to IT
- High fence between business and IT
 - IT cannot influence the business
- IT projects are not engineering projects; estimating IT projects is difficult
- Lots of GC evolving GC direction and policy

An innovative way forward

The “project” approach was too slow – we were loosing

Solution definition	3-6 months
Solution options analysis	3-6 months
Contracting process	9-18 months
Delivery of solution	3 years (+1 year extension?)
Total	51-78 months

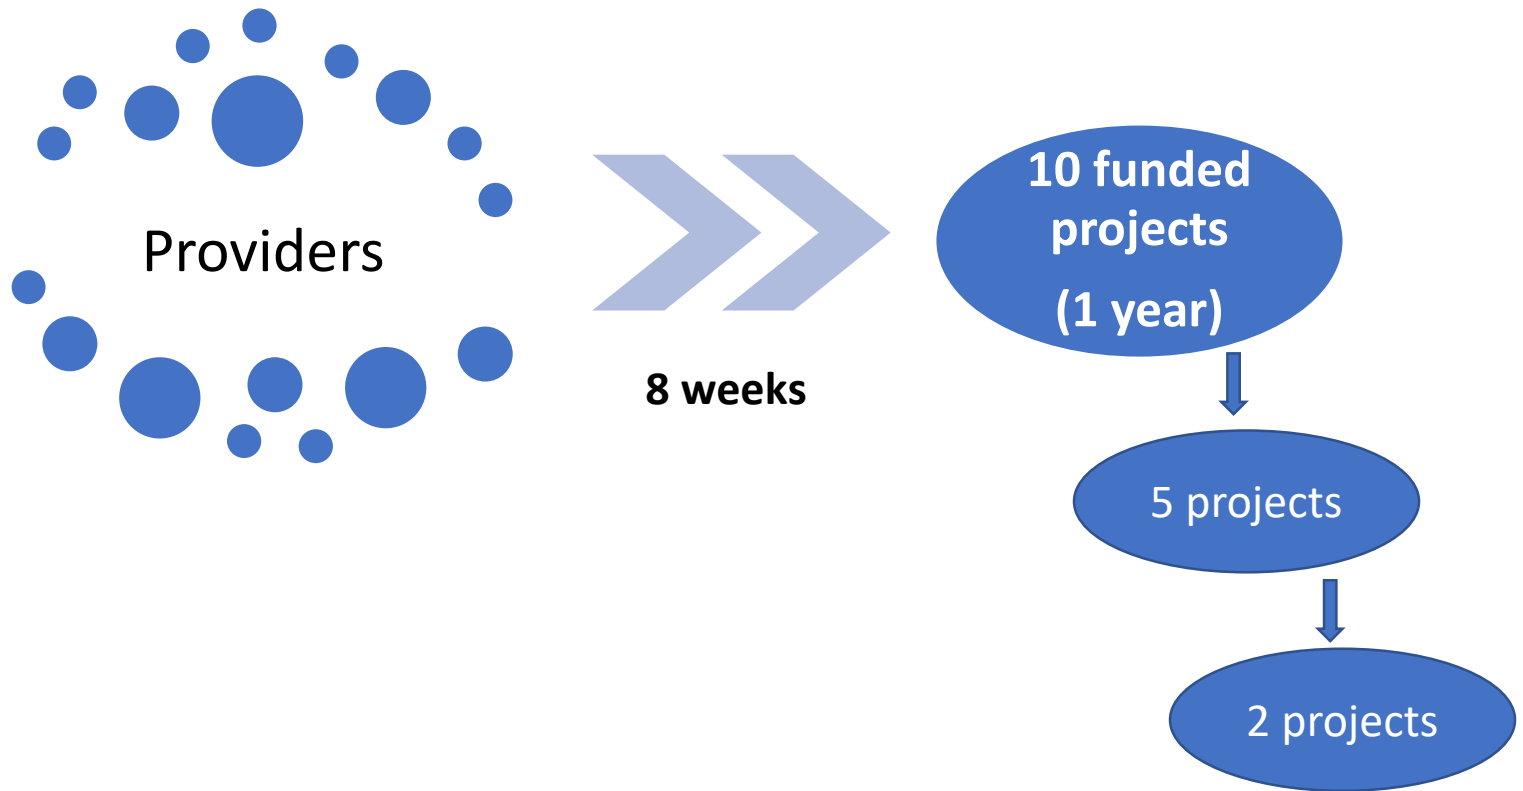

Knowledge and technology are increasingly distributed

Yet, the approach to funding a research project was to “select out”, i.e. to identify one successful bidder that would get the contract.

The IDEaS program increased diversity and speed ...

- By starting with the problem, not the solution

Changing the paradigm

Solution centric

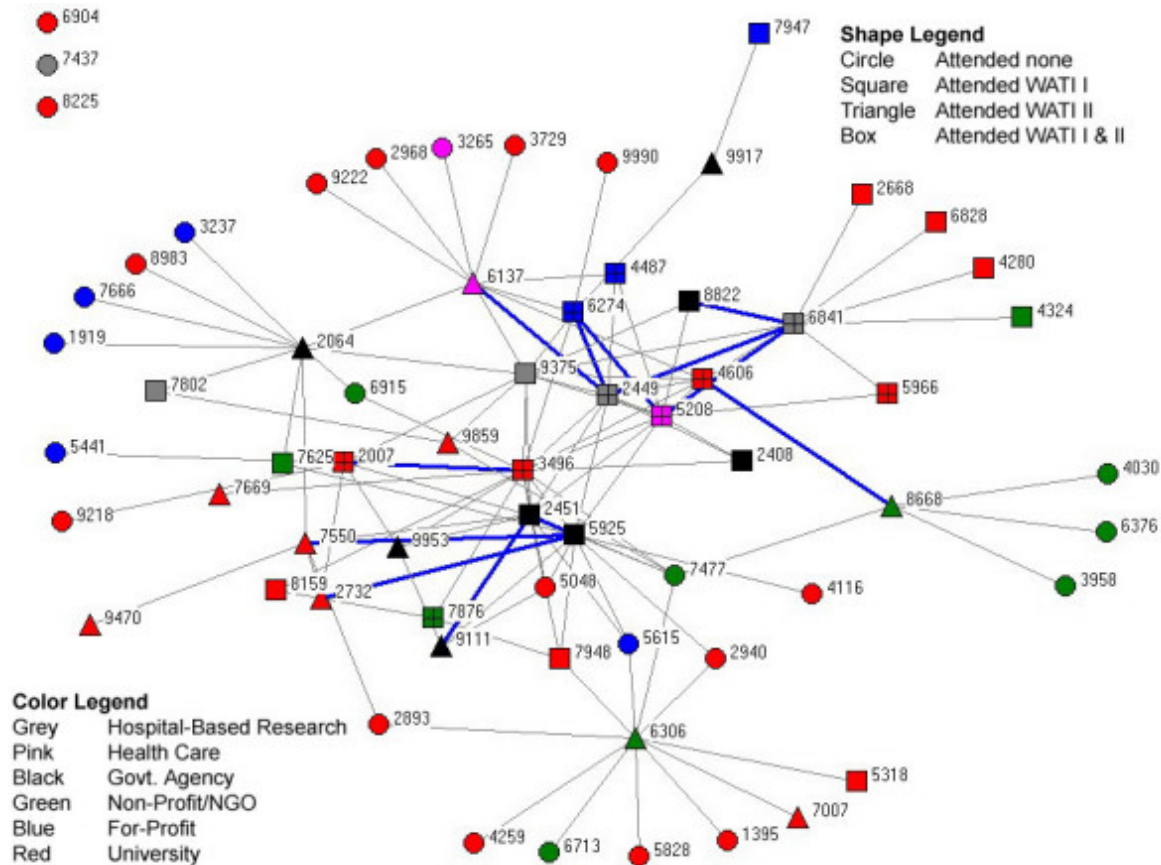

Problem centric

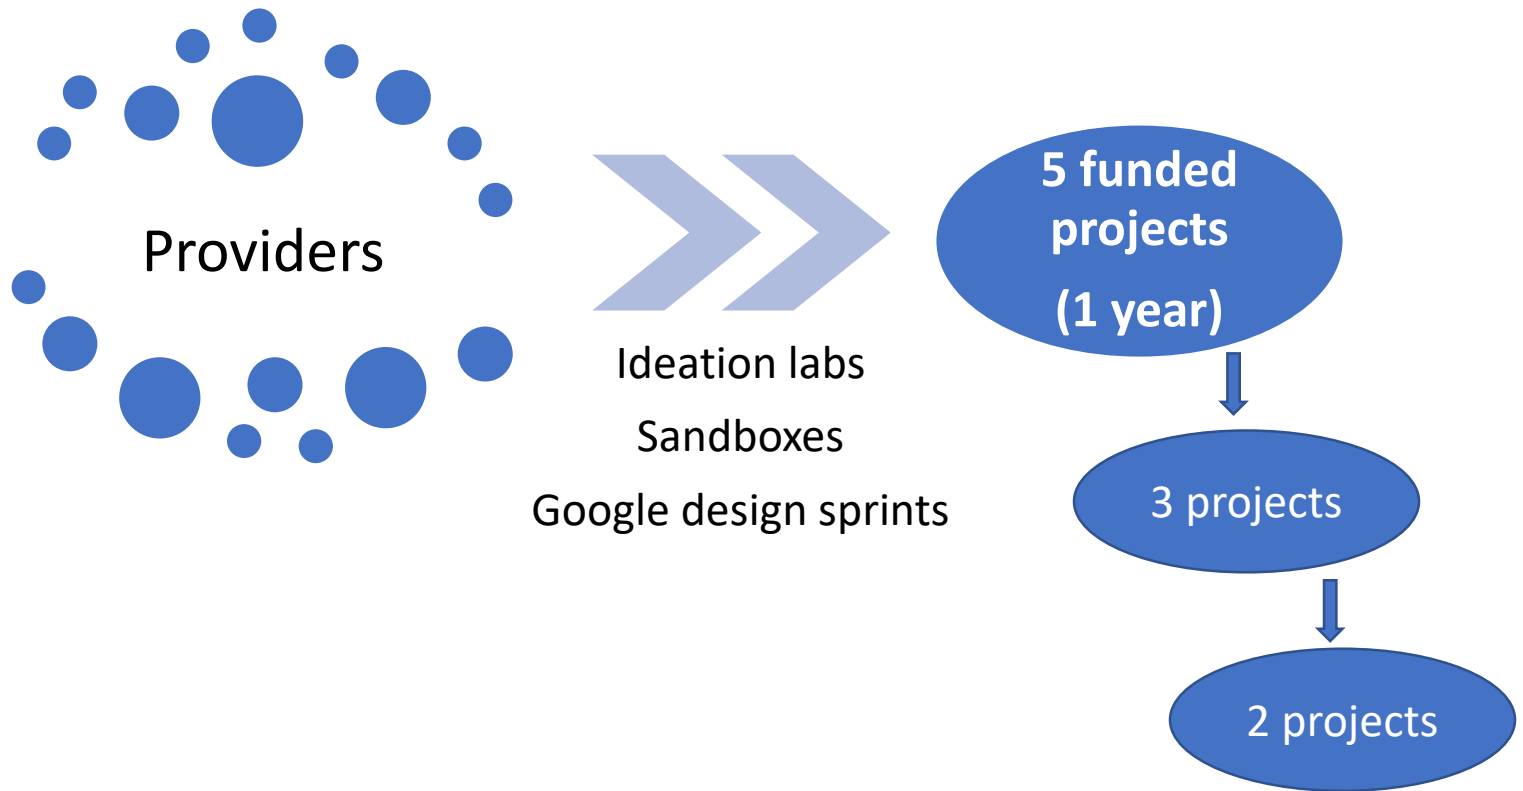

What's next?.....

Promoting “connectivity”

The IDEaS program sought to increase robustness and speed ...

- By starting with the problem, not the solution

Consider a different approach

- Approach our internal problems/opportunities in a similar fashion than is done in the scientific, medical, public policy arenas.
 - Do lots of research before moving to a solution – create knowledge that leads to innovation, that leads to solutions, to new policies.....
- This approach is funded by the GC
 - Get funding for ‘discovery’ research
 - Try, fail, learn, adapt
 - Share knowledge; partner; collaborate
 - Become more targeted in your research
 - Seek partnership and directed funding to develop and implement
 - Obtain benefits

Proven Practices to adopt

- Business outcomes, benefits realizations, not project methodologies at the onset, or as the driver
- Agile methodologies
- Partnerships, collaboration.....
- Cloud services
 - What are these?
- New dialogue – OK to fail
 - Some risk with this
 - Fail during the discovery stages, not after project approval

Organizational take aways

- Think as a research organization
 - Become problem centric, not solution centric
 - Do not step into 'project' mode too quickly
- Ensure your organization takes the time to do its homework, to analyse, to discover what is needed to reach the desired outcomes
 - Lots of discovery is needed; the final path forward may surprise you
- Encourage the use of proven practices, and digital tools to improve your business/to meet challenges
 - Let IT influence the business; IT and 'business' must work together (agile), and leverage what IT, from everywhere, can bring

YOUR JOB IS
"DIGITAL
TRANSFORM-
ATION."

IT'S NOT JUST
ABOUT
DISRUPTIVE
TECHNOLOGY.

WE NEED A
WHOLE NEW
WAY OF
THINKING.

ACROSS THE
ENTIRE
ORGANIZATION.

TOM
FISH
BURNE

THIS IS ONE
OF OUR TOP
PRIORITIES.

WE'RE ALL
COUNTING
ON YOU.

SO, GOOD LUCK
ON THIS SUMMER
INTERNSHIP.

FM community take aways

- Consider well financial ramifications
 - Funding for discovery work is required
 - Sign-off on submissions with 'agile' methodologies
 - Different considerations
- Get involved in project planning; challenge assumptions, influence discovery
 - Demand to see the logic model to achieve the expected business outcomes
- Ensure the approach is 'user' centric
 - e.g. for FM system, RC manager centric not FM process centric

"Are you part of the problem, part of the solution,
part of the problem with the solution or part of
the solution to the problem with the solution?"

PROJECT LAUNCH MEETING

GET ME OUT
OF HERE!!!

LET'S DISCUSS
PROJECT ALTERNATIVES

DON'T FEED
